

Lab 2: Agile Backlog Creation & Sprint Simulation in Jira

NAME: SHREYA N HEGDE

SRN: PES1UG24AM401

SECTION: G

TITLE: PERSONAL SUBSCRIPTION AND RECURRING EXPENSE AUDITOR

1. EPICS

Epic 1: Transaction Import & Analysis

Description: Enable users to import and analyze their financial transaction data to identify recurring transactions and understand spending patterns.

Epic 2: Subscription Detection & Management

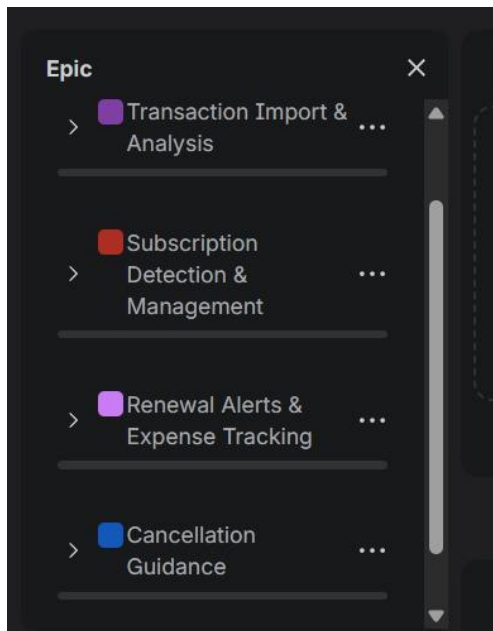

Description: Identify recurring subscription transactions and organize detected subscriptions for easy management.

Epic 3: Renewal Alerts & Expense Tracking

Description: Track subscription renewal dates, notify users about upcoming renewals, and monitor subscription-related expenses.

Epic 4: Cancellation Guidance

Description: Help users identify unwanted subscriptions and provide guidance for cancelling them.

2. USER STORIES

Epic	Story ID	User Story	Story Points
Transaction Import & Analysis	1.1	As a user, I want to import my transaction data so that my subscriptions can be analyzed automatically.	5
Transaction Import & Analysis	1.2	As a user, I want the system to identify recurring transactions so that I can recognize my regular subscriptions.	8
Subscription Detection & Management	2.1	As a user, I want to view my detected subscriptions so that I can easily monitor them.	3
Subscription Detection & Management	2.2	As a user, I want to record subscription renewal dates so that I can keep track of upcoming renewals.	3
Subscription Detection & Management	2.3	As a user, I want to categorize my subscriptions so that I can organize and understand my expenses.	3

Epic	Story ID	User Story	Story Points
Renewal Alerts & Expense Tracking	3.1	As a user, I want to receive notifications about upcoming renewals so that I don't miss important subscription payments.	5
Renewal Alerts & Expense Tracking	3.2	As a user, I want to track my monthly subscription expenses so that I can understand how much I spend on subscriptions.	5
Cancellation Guidance	4.1	As a user, I want to receive cancellation guidance so that I know how to cancel unwanted subscriptions.	3
Cancellation Guidance	4.2	As a user, I want the system to identify unwanted subscriptions so that I can reduce unnecessary expenses.	5

3. PRIORITIZATION

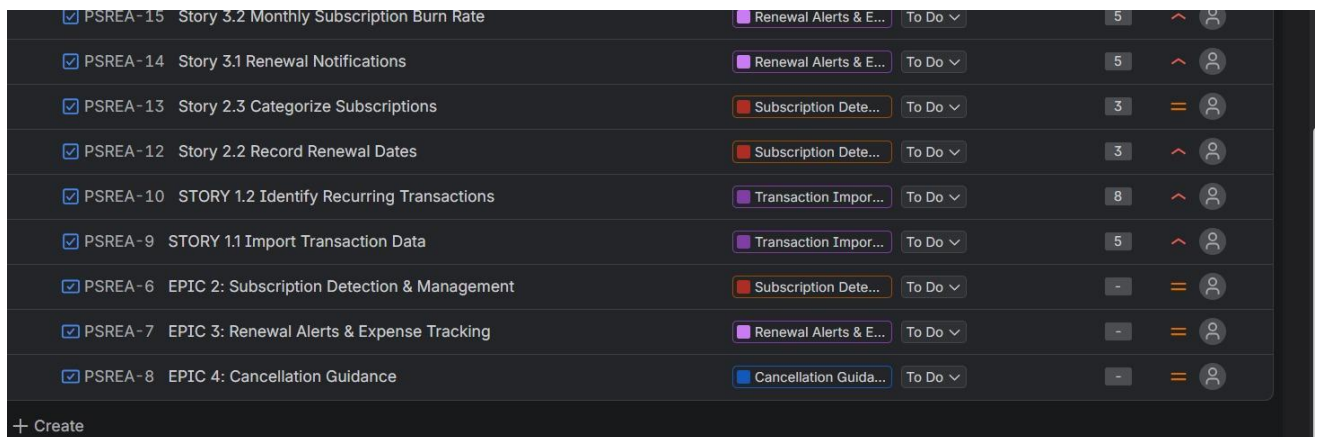

The User Stories were prioritized based on their importance, user impact, and dependency on other system functionalities.

4. STORY POINT ESTIMATION

Story Points were assigned using the Fibonacci sequence to estimate relative effort, complexity, risk, and uncertainty. Planning Poker was considered as the estimation technique for reaching a team consensus.

5. SPRINT EXECUTION

Sprint 1

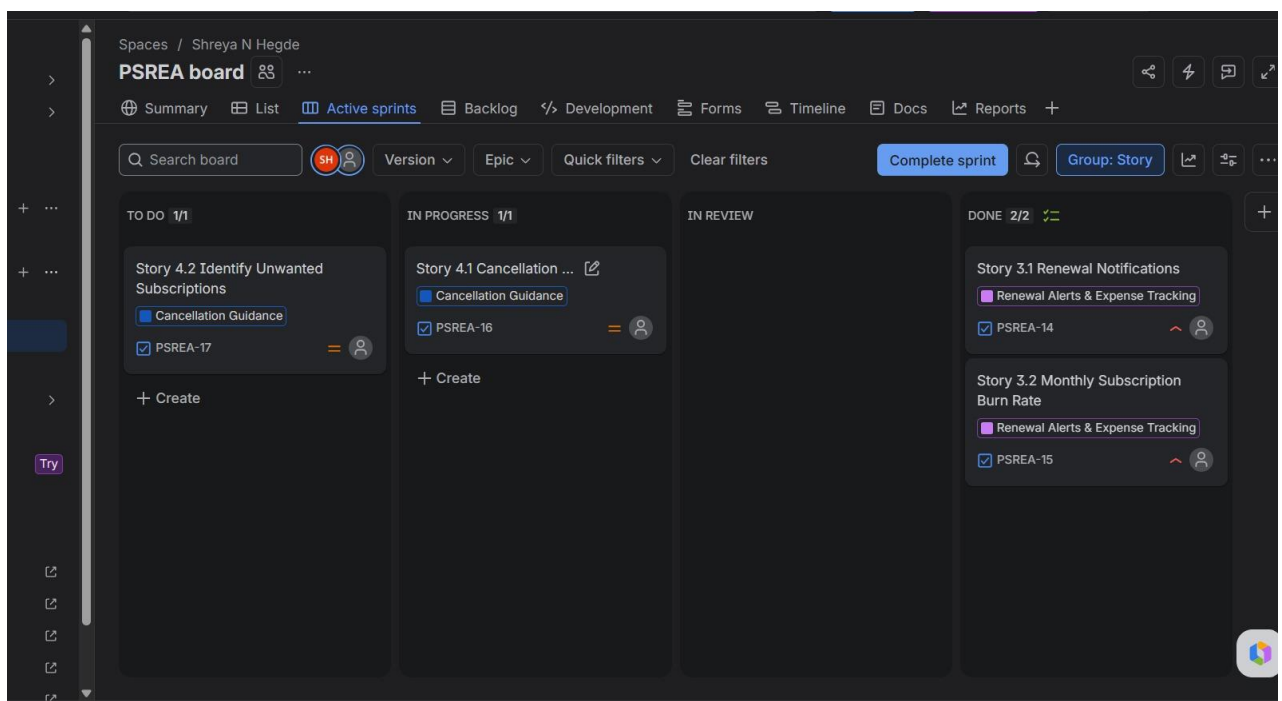

Sprint 1 was created by selecting a set of prioritized User Stories from the backlog. The sprint was started and the selected stories were moved through To Do → In Progress → Done to simulate the development process. After completion, Sprint 1 was completed.

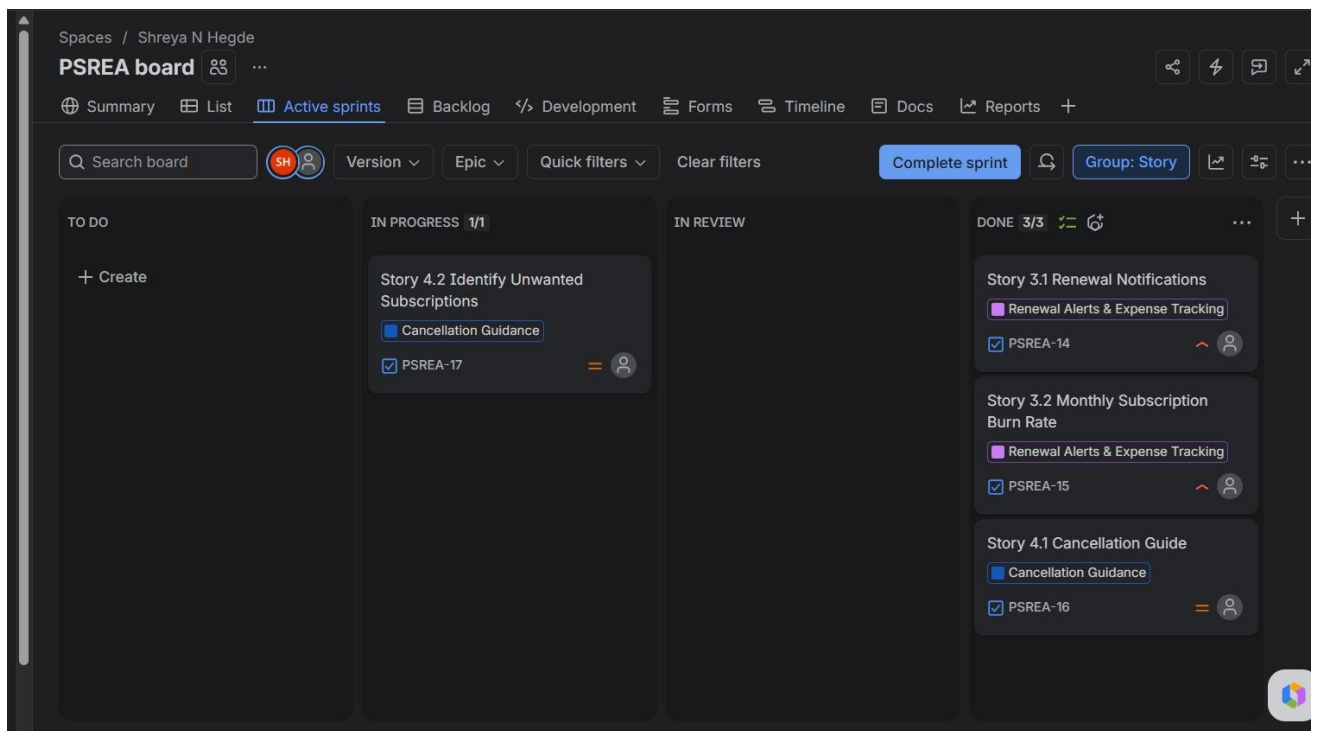

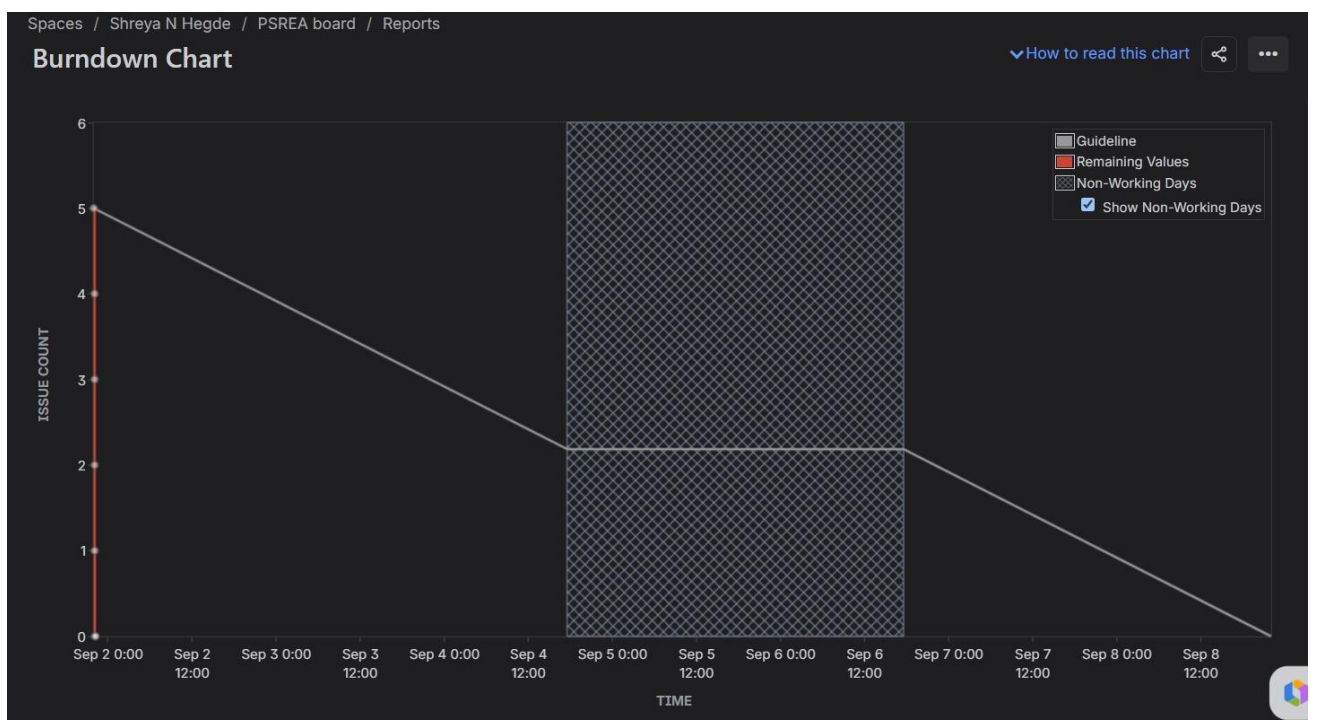

Sprint 2

Sprint 2 was created using the remaining prioritized User Stories. The selected stories were progressed through To Do → In Progress → Done, and the sprint was completed after all planned work was finished.

6. BURNDOWN CHART

The Burndown Chart was used to monitor the amount of work remaining during the sprint. The chart shows the progress of work as User Stories were completed. A decreasing remaining-work trend indicates that the team was progressing toward completing the sprint commitment.

7. REFLECTION QUESTIONS

Q1. Did your estimations reflect the actual effort?

Answer:

The estimations provided a reasonable approximation of the effort required for the User Stories. Since this was a simulated sprint, the Story Points were mainly used to represent relative complexity and effort.

Q2. Was your backlog well-prioritized?

Answer:

Yes. The backlog was prioritized based on user impact and the importance of each functionality. Core transaction and subscription detection features were given higher priority because they form the foundation for the remaining features.

Q3. How did your simulated sprint align with your plan?

Answer:

The simulated sprint generally aligned with the plan because the selected User Stories were moved through To Do, In Progress, and Done. The planned work for the two sprints was completed within the simulation.

Q4. What insights did the burndown chart give about your team's capacity?

Answer:

The Burndown Chart provided a visual representation of the team's progress and remaining workload. It showed how quickly the planned work was being completed and helped evaluate whether the team was progressing toward completing the sprint.
